

Daksha Bordekar

Chennai, India | drbordekar@gmail.com | LinkedIn | GitHub

Professional Summary

Software Engineer with experience building scalable backend systems, AI-powered applications, and enterprise software. Strong foundation in **C++**, **Python**, **Data Structures & Algorithms**, **OOP**, **DBMS**, and **Operating Systems**. Skilled in FastAPI, Django, React, PostgreSQL, Docker, and modern AI frameworks.

Skills

- **Languages:** C++, Python, Java, SQL, TypeScript
- **Core CS:** DSA, OOP, DBMS, OS, Computer Networks
- **Frameworks:** FastAPI, Django, React, Next.js, LangGraph
- **Databases:** PostgreSQL, Neo4j, Redis, Qdrant
- **Tools:** Git, Docker, RabbitMQ, Celery, GitHub Actions

Education

Vellore Institute of Technology, Chennai
B.Tech in Computer Science (AI & Robotics)
CGPA: 8.74

Experience

Software Developer Intern, Bluestock

- Optimized React application by resolving 25+ frontend performance bottlenecks, improving responsiveness by 30%.
- Collaborated using Git workflows to build production-ready software.

Research Intern, VIT Chennai

- Developed machine learning pipelines for **EEG signal preprocessing**, **feature extraction**, and **biometric authentication** using Python and Scikit-learn.
- Implemented behavioral authentication using **keystroke dynamics** datasets for multimodal identity verification.

AI Engineer, PerSynix

- Designed and developed AI-powered applications using Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and multi-agent architectures.
- Built scalable backend services with Python, FastAPI, PostgreSQL, and Docker for production-ready AI systems.
- Developed end-to-end AI solutions integrating LangGraph, vector databases, and REST APIs for enterprise automation.

Projects

SentinelOS AI – Enterprise Digital Twin Operating System

- Designed and developed an enterprise Digital Twin platform integrating **PostgreSQL**, **Neo4j**, and **Qdrant** for unified organizational intelligence.
- Built a **LangGraph-based multi-agent architecture** with FastAPI and Retrieval-Augmented Generation (RAG) for natural language enterprise querying.
- Implemented asynchronous task execution using **Celery**, **RabbitMQ**, and **Redis**, improving system scalability.
- Tech Stack: Python • FastAPI • LangGraph • PostgreSQL • Neo4j • Redis • Docker

SecureCodeAI – Autonomous AI Security Engineer

- Developed an autonomous AI-powered software security platform for **vulnerability detection**, **automated patch generation**, and **GitHub pull request creation**.
- Designed a multi-agent analysis pipeline integrating **Tree-sitter**, **Semgrep**, **Bandit**, and **Groq LLMs** for automated secure code remediation.
- Built a full-stack application using **Django**, **React**, **TypeScript**, **Celery**, and **Redis**.

Achievements

1st Place – Operation Trinetra National Defense Hackathon

2025

Winner among 130+ participating teams.

Top 5 – FRONTIER: Build the Next AI Hackathon

2026

Built SecureCode AI, a multi-agent cybersecurity platform for automated vulnerability detection and remediation.

Additional Information

Certifications

Full Stack Web Development (Udemy)
AI & Machine Learning Certification (YHills)

Leadership

Operations Team Lead, AI Club VIT Chennai
Organized Hack the Horizon 2.0 and Club Expo events.
